PM: Wake up to red alert on climate change crisis

A BOMBSHELL UN report on global warming is a "wake-up call to the world", warns Boris Johnson. The devastating prediction that heatwaves, flooding and droughts will become more frequent and intense has been dubbed a "code red for humanity".

IPCC report reveals urgent need for countries to prepare for events already under way

Climate change: Time running out to stop catastrophe - Alok Sharma

By Francesca Gillett
BBC News
8 August

Former Business Secretary Alok Sharma is now leading COP26, the climate summit in Glasgow in November

The world is "dangerously close" to running out of time to stop a climate change catastrophe, the UK government's climate chief Alok Sharma has said.

Mr Sharma - who is leading COP26, the climate summit hosted by the UK this year - said the effects were already clear with floods, fires and heatwaves.

"We can't afford to wait two years, five years, 10 years - this is the moment," he told the Observer.

Five chilling predictions from doomsday climate report predicting 'devastating' future

The report said there is "high confidence" that human activities are the main drivers of more frequent intense heatwaves, glaciers melting, ocean warming and acidification (Image: AFP via Getty Images)

Major climate changes inevitable and irreversible - IPCC's starkest warning yet

Report warns temperatures likely to rise by more than 1.5C bringing widespread extreme weather

- IPCC's verdict on climate crimes of humanity: guilty as hell
- Climate crisis 'unequivocally' caused by humans, says IPCC

Human activity is changing the Earth's climate in ways "unprecedented" in thousands or hundreds of thousands of years, with some of the changes now inevitable and "irreversible", climate scientists have warned.

'We can't wait. The signs are unmistakable': Biden urges US action after doomsday UN report says global warming is ALREADY causing extreme weather and the world will heat up by 2.7F by 2040 - a decade earlier than forecast

- Scientists expect temperatures to rise by 2.7F above pre-industrial levels up to decade earlier than expected
- It had been thought it would happen between 2030 and 2052 but it is now expected between now and 2040
- Bombshell United Nations report comes as record heatwaves, wildfires and floods hit countries around world
- The US is experiencing such events this year with more than 3,000 wildfires, over \$8B in flood damages and more than 3,000 people killed in heatwaves

'Code Red for humanity': Doomsday UN report says global warming is ALREADY causing extreme weather and the world will heat up by 1.5C by 2040 - a decade earlier than forecast

Hundreds of climate scientists, thousands of research studies, eight years of work - building on more than three decades of research before that - have been boiled down in the past fortnight to a single message: we are running out of time.

A DIRTY half-dozen have been accused of killing the planet by failing to follow the UK's lead on slashing carbon emissions.

The finger is being pointed at Germany, Russia, China, India, the US, and Brazil who have now been ordered to clean up their act.
